THEIR NEED

NOTE: This is one of two very similar projects completed for this client. Please view the Market case study as well.

The cost and timing of the project were a major factor. The host neighborhood had doubts about the project as well, so it needed to be a perfect building to win community support. Besides the unique exterior appeal of the building, a complex heating and cooling system would need to be installed allowing rooms to be heated and cooled independently.

OUR SOLUTION

As with the Market Street project, I-R Mobile Modular managed the project and chose Whitley to provide the modular units. Despite delays at the site, the 23,000 sft. building was completed in four months. It is a showpiece, both inside and out, contributing to a resurgent sense of community pride. The building came in under budget and on time. A sophisticated boiler / chiller system was installed at Whitley's production facility in Indiana - allowing each classroom space to be individually climate controlled.
