

Ortho

A major name in home and lawn care, Ortho home and garden products are found in stores throughout the country.

Their Need

Ortho is a growing company with an expanding product base. Scientists conducting product research are fundamental to the company's growth and the company had twenty scientists poised to come on-board to develop a new product line. Ortho needed 40,000 square feet of state-of-the-art laboratories very fast. And, construction of the building could not disrupt the ongoing work of other scientists on campus.

The Whitley Solution

The project was undertaken in cooperation with distributor Williams Scotsman. The building was constructed and open in less than 6 months. It was the most cost effective solution for Ortho's needs, as well as the fastest. Fast-track construction of the project meant that Ortho scientists could bring new product to market faster saving Ortho a great deal of money. Constructed of steel and concrete construction, completed with laboratory equipment, cabinetry, fume hoods, custom piping, stone counters and epoxy sinks, the building was completed in Indiana and quickly assembled and finished in New Jersey.
