

CASE STUDY

KEY ACHIEVEMENTS

20 modules

14,400 sq ft

Short 5 month construction

Brick & limestone façade

Includes lab and offices

Coordinates with existing building

Memorial Hospital is the premier medical center striving to enhance the well-being of the people of York, PA. The hospital is known for its devotion to personalized care. Due to the hospital's success, their staff was fast exceeding the space and their building was quickly becoming cramped. With a Whitley building, they could add space in a short time period.

MEMORIAL HOSPITAL

Expanding quality service quickly

York, Pennsylvania is a growing area and the hospital was faced with rapidly increasing community health care expectations, but a cramped, older building. The hospital was in need of a rapid solution to their problem, as well as a building that would complement their existing brick and limestone facade. Whitley Manufacturing was able to offer a permanent, multi-story design that could be accomplished on within an accelerated time frame.

A stucco-like exterior finish was incorporated into the design to give the building a look of permanence and sophistication. Whitley's permanent facility was composed of 20 components spanning 14,400 square feet across two levels. The design blends seamlessly into the existing building and complements both the look and function of the hospital. With Whitley Manufacturing's accelerated building system, five months was the total time period required to design and construct the building, which was finished at the site by Williams-Scotsman. The finished
