ABOUT WHITLEY MANUFACTURING

The name Whitley Manufacturing has become synonymous with innovation and recognition within the modular industry. We pioneered the development of clearspan units, the UpGrade, non-combustible units, all steel structures, and lightweight-poured concrete floors. And this innovation has been recognized time and again by the Modular Building Institute, the industry's most well respected trade organization.

WHY WHITLEY MANUFACTURING

Time Savings. Our manufacturing process allows the structure to be built while the site is being prepared, saving you significant time and cost. That adds up to a quick return on your investment (ROI). And, because most of the construction takes place off-site, you'll have minimal disruptions to surrounding businesses.

Our four facilities build custom modular buildings for a national clientele. Consistent labor rates & volume purchasing give us the ability to offer exceptional buildings with exceptional value. Plus our construction system reduces timelines & overruns.

Providing
Modular Solutions

MEDICAL

Whitley Manufacturing offers temporary and permanent applications for the health care industry. Our experience of designing and building numerous medical facilities has resulted in satisfied health care professionals throughout the country. When medical organizations require a new or expanded facility for rehabilitation clinics, emergency trauma centers, operating rooms, hospital extensions, radiotherapy treatments, diagnostic centers, Whitley will build on the tightest budget and timeline, while maintaining strict medical and design specifications.

RADIOTHERAPY CANCER TREATMENT CENTER

Unique Benefits

- Faster than conventional building.
- Prefabricated for less set-up time: design can include pre-installed ventilation, HVAC, plumbing, electrical, lighting and receptacles.
- Designed to meet all local and state codes.
- Majority of construction takes place off-site, minimizing disruption to essential services.
- Saves man hours and building material waste.
- Less environmental impact.
- Flexible design for future needs.
- Custom designed and built to meet your specifications.
